Continuation of 11. does NOT place the application in condition for allowance because:

Applicant contends that findings with respect to the word "buffer" are "clearly insufficient" to conclude that the terms "transmission buffer" and "reception buffer" are not supported by the specification. It is maintained that a "buffer" is a common electronic component that behaves no differently when it is part of a transmission circuit as opposed to a reception circuit. In either case, the "buffer" is either a data buffer or a buffer amplifier. As noted in the outstanding office action, the specification is silent as to which type of buffer is being used; the Figures, on the other hand, clearly show a buffer amplifier. Buffer amplifiers have no storage capacity. There is no question that the specification supports a "transmission buffer" and a "reception buffer". But there is also no question that neither is disclosed as being capable of storing data.

Applicant contends that a skilled artisan would not look to Na, directed toward digital cordless telephones, to solve the problems of the wireless endoscope art. But both arts are directed toward wireless communication of data over short distances. Certainly a skilled artisan would understand that wireless data transfer systems are disclosed outside of the endoscope arts.
